EDUCATION

Wilfrid Laurier University

B.Sc in Data Science | Big Data Concentration | Economics Minor

Expected Graduation: April 2027

Waterloo, ON

EXPERIENCE

Data Scientist Intern

Manulife Financial

May 2026 - August 2026

Toronto, ON

- Supporting Manulife's **Generative AI team** in building governed analytics and **LLM solutions** for Risk, Treasury, and Finance stakeholders.

Research Assistant

Wilfrid Laurier University

January 2026 - March 2026

Waterloo, ON

- Cleaned and standardized UAVBench scenario data in JSON to support training, validation, and **benchmarking** workflows for reasoning tasks.
- Prepared features, validated data quality, and organized labels across core safety tasks to support **machine learning** development.
- Analyzed benchmark outputs across domains and documented findings to support model evaluation and **research workflows**.

Data Engineer Intern

John Hancock

September 2025 - December 2025

Toronto, ON

- Built and optimized **data pipelines** in Databricks using PySpark and SQL to support data ingestion, transformation, and analytics workflows.
- Automated ingestion and transformation processes for ML and LLM use cases, reducing processing time by **30%** and improving data consistency.
- Developed PySpark monitoring workflows to track **data quality** and pipeline execution, improving reliability by **25%** across reporting operations.
- Migrated legacy SQL workflows to scalable PySpark pipelines, supporting modern **data architecture** and efficient enterprise data delivery.
- Collaborated with engineers and stakeholders to deliver **clean datasets** for modeling, analytics, and downstream business use cases.

Teaching Assistant

Wilfrid Laurier University

September 2024 - April 2025

Waterloo, ON

- Supported **200+ students** in Data Analytics and Calculus by clearly explaining concepts and debugging **Python and R** code.

Data Analyst Intern

RBC

May 2024 - August 2024

Toronto, ON

- Validated daily mortgage disbursement data **exceeding \$2.5M with 97% accuracy** to maintain compliance and reporting accuracy daily.
- Built **Power BI dashboards and Excel trackers** that reduced escalation time for corrupted records by **20%** across operational workflows.
- Worked with reconciliation, risk, and compliance teams to resolve discrepancies and strengthen internal reporting controls.

Software Engineer Intern

Riipen Networks

January 2024 - April 2024

Toronto, ON

- Collaborated with developers, UX, and marketing to turn behavioral insights into web improvements, increasing session time by **15%**.

PROJECTS

Cortex, HackCanada 2026 Top 8 | *Next.js, React, TypeScript, Three.js, FastAPI, Python, Google Gemini*

[Live Demo](#)

- Built Cortex, an AI platform that ingests **GitHub repositories, PDFs, and text** to evaluate skills across **51 computer science categories**.
- Engineered a **FastAPI** pipeline to extract features, score proficiency, and process uploaded developer artifacts across multiple input sources.
- Created an interactive **Three.js 3D brain** that visualizes skill strength across 9 regions and updates dynamically as users upload new evidence.

Trade-Risk, CxC Data Science Hackathon Finalist | *Python, Flask, TensorFlow, Keras, Pandas, NumPy, Backboard.io, Gemini API, pytest*

- Built a scenario-based tariff risk engine in **Python** to model Canadian export sector exposure under changing trade policy conditions.
- Used **Pandas** and **NumPy** to process trade data, engineer sector-level features, and score risk using deterministic economic signals.
- Integrated **TensorFlow/Keras** to support comparative machine learning analysis alongside the rule-based risk engine.
- Developed a **Flask API** and used **Backboard.io** to cache **Gemini API** explanations for consistent, auditable scenario outputs.

Stratton Oak Bot | *Python, Flask, LangChain, OpenAI API*

- Built a **retrieval-augmented assistant** that explains portfolio metrics, financial statements, and market indicators for finance users.
- Engineered a **vector retrieval pipeline** to fetch relevant context before LLM response generation across financial document queries.
- Developed a **Flask REST API** for conversational querying over financial datasets with contextual retrieval and response orchestration.

TECHNICAL SKILLS

Languages: Python, SQL, R, C/C++, Java, JavaScript, TypeScript, VBA

Platforms & Tools: Azure Databricks, Snowflake, Jupyter, Git, Linux, Power BI, Excel, Streamlit

Libraries & Frameworks: Pandas, NumPy, scikit-learn, PyTorch, Matplotlib, pytest, LangChain, React

Relevant Courses: Artificial Intelligence, Machine Learning, Data Mining, Algorithm Design/Analysis
