EDUCATION

Wilfrid Laurier University

B.Sc in Data Science | Big Data Concentration | Economics Minor

Expected Graduation: April 2027

Waterloo, ON

TECHNICAL SKILLS

Languages: Python, SQL, R, C/C++, Java, JavaScript, TypeScript, VBA

Platforms & Tools: Azure Databricks, Snowflake, Jupyter, Git, Linux, Power BI, Excel, Streamlit

Libraries & Frameworks: Pandas, NumPy, scikit-learn, PyTorch, Matplotlib, pytest, LangChain, React

Relevant Courses: Artificial Intelligence, Machine Learning, Data Mining, Algorithm Design/Analysis

EXPERIENCE

Manulife Financial

May 2026 – August 2026

Incoming Data Scientist Co-Op

Toronto, ON

- Supporting the **Generative AI team** at Manulife, partnering with **Risk, Treasury, and Finance** stakeholders to develop governed analytics and LLM-driven solutions that enhance decision-making, forecasting, and operational efficiency.

Manulife Financial

September 2025 – December 2025

Data Analyst Co-Op

Toronto, ON

- Leveraged **PySpark and SQL in Databricks** to process financial datasets for Global Wealth and Asset Management, building scalable pipelines that supported analytics and contributed to a **9% portfolio return** across diversified asset strategies.
- Automated key data ingestion and transformation processes using Databricks notebooks and scheduled workflows, **reducing processing time by 30%** and significantly improving data readiness for machine learning and LLM experimentation.
- Designed and implemented PySpark-based monitoring and visualization pipelines to assess performance of core operations, enhancing visibility into data quality and pipeline health with **25% improvement** in overall execution reliability.
- Migrated legacy SQL workflows into PySpark to support transition toward a modern lakehouse-oriented analytics environment used for scalable ML experimentation, governance controls, and advanced financial reporting initiatives.
- Collaborated with cross-functional teams including data engineers, analysts, and product stakeholders to deliver clean, version-controlled datasets used for modeling, reporting, and enterprise AI solution development initiatives.

Wilfrid Laurier University

September 2024 – April 2025

Teaching Assistant

Waterloo, ON

- Supported **over 200 students** across DATA100 (Intro to Data Analytics) and MA103 (Calculus I) by clearly explaining programming concepts, debugging **Python and R code**, and reinforcing core logic and problem-solving techniques.
- Provided individualized assistance in lab sessions, helping students build functions, troubleshoot statistical models, and interpret regression outputs in real time, while reinforcing problem-solving strategies and core programming concepts.
- Graded 200+ assignments spanning code scripts, math problem sets, and written analysis, ensuring fairness, consistency, and detailed, personalized feedback under tight academic timelines.

RBC

May 2024 – August 2024

Operations Officer Co-Op

Toronto, ON

- Analyzed and validated daily mortgage disbursement data **exceeding \$2.5M with 97% accuracy**, reconciling transaction records against internal systems to ensure regulatory compliance, data integrity and accurate downstream financial reporting.
- Designed and maintained **Power BI dashboards and Excel tracking tools** to monitor workflow volumes, turnaround times, and exception trends, identifying operational bottlenecks and reducing escalation time for corrupted records by **20%**.
- Collaborated with reconciliation, risk, and compliance teams to **investigate data discrepancies**, support audit reviews, and strengthen reporting controls through structured documentation and consistent data validation procedures.

Riipen Networks

January 2024 – April 2024

Software Engineer Intern

Toronto, ON

- Collaborated with developers, UX designers, and marketing teams to optimize partner-facing web applications, leveraging Python-based analytics and engagement metrics to drive a **15% increase in session time**.
- Developed and deployed SEO-optimized blog content and landing pages informed by keyword analysis and user journey data, improving discoverability and user acquisition performance.
- Translated behavioral analytics into front-end enhancements and feature adjustments, aligning technical improvements with cross-functional rollout plans and sprint objectives.

PROJECTS

TradeRisk | Python, Flask, TensorFlow, Gemini API, pytest

- Engineered a structured data pipeline for scenario inputs and historical trade data, performing feature scaling, normalization, and validation checks to ensure reproducibility and robustness across multiple policy shock configurations.
- Implemented a **CNN** to generate sector-level risk scores from engineered macroeconomic and tariff-related features.
- Architected a scenario-based tariff risk engine that applied model outputs to simulate trade policy shocks and perform sector-level stress testing across Canadian export markets, enabling structured baseline comparisons and impact analysis.
- Built a **Flask REST API** to serve scenario results and integrated the **Gemini API** to generate contextual AI-driven explanations, implementing Backboard as a caching layer to ensure deterministic, versioned, and auditable outputs.
- Implemented automated testing with **pytest** to validate model outputs and API behavior, ensuring reliable deployment.
